### HYDROTEC expands in Germany

Sustainability is enhanced by domestic production

*Wildeshausen, 05th Nov. 2021* - HYDROTEC Technologies AG will move production capacities to Germany. As Uwe Brinkschulte (CEO) explains, the construction of a foundry in Wildeshausen is intended to make a further contribution to climate protection. It will be built as a state of the art facility to ensure low environment impact. Furthermore the foundry will support the regional economy and create 100 new qualified jobs.

As an attractive employer, HYDROTEC wants to continue to bear social and environmental responsibility and break new ground. Less imports, more sustainability. That is the strategy to follow the long and short-term goals. "In materials, processing, manufacturing, transport and recycling, it will place great emphasis on minimising environmental impact and optimising resource consumption and manufacturing processes", according to Uwe Brinkschulte.

HYDROTEC is socially committed at all locations and is looking for interdisciplinary exchanges with all business partners. As a family-run, international company, it is important to us to maintain a corporate culture with equal hierarchy. "An open dialogue between employees and management is just as important as the dialogue with the social and economic groups in our region", says Uwe.

The cast iron products that leave the production processes can later be removed and recycled even after many years. "This is one aspect, which is relevant for producers and investors in construction measures", Uwe emphasises. HYDROTEC expects the production to start in year 2023, depending on approval procedure.

#### Company Profile

In the year 1968, founded as a commercial agency by Gisbert Brinkschulte, HYDROTEC Technologies has its registered office in Wildeshausen, Germany. This family-run company counts as one of the leading suppliers of manhole covers and drainage channels. The company has 120 employees and country representation all over Europe and USA.
